RentOuts × Mezo

Mezo Buildathon · Wave 2 · Track 2

Keep your bitcoin.
Pay your rent.

Now the escrow calls Mezo itself. One signature, one transaction: your trove mints MUSD and the lease is funded. Pay monthly straight from the trove, and manage its risk in the app.

mezo.rentouts.co · github.com/AiAlchemist0/rentouts-musd · rentouts.co

WAVE 1 FEEDBACK → WAVE 2

Four things the judges asked for. All four shipped.

“Borrow sits next to a generic ERC-20 escrow rather than composing with it.”

The escrow now calls Mezo Borrow from inside the contract.

`borrowAndFund` / `withdrawAndFund`: one transaction opens or draws on the tenant's trove and funds the lease.

“Put idle escrowed MUSD to work.”

We checked the Stability Pool and kept deposits out. Pay-monthly removes the idle pile.

No MUSD yield, losses on liquidations, frozen withdrawals: the wrong risk for a deposit owed back in full.

“Trove management after paying.”

A Your trove panel: repay, add BTC, withdraw, close.

Live ratio and liquidation price, Recovery Mode explained, headroom from `getTroveMaxBorrowingCapacity`.

“Real users and a revenue model.”

Revenue model stated: landlords pay 1% of rent, off-chain.

The escrow stays fee-free forever. First outside tenants and landlords are the Wave 3 goal.

COMPOSING WITH MEZO BORROW

One signature. One transaction. Trove opened, lease paid.

1

Tenant signs

One Mezo EIP-712 message: `OpenTrove` or `WithdrawMUSD`, with the escrow as recipient. A message, not a transaction.

→

2

RentEscrowV2

`borrowAndFund · withdrawAndFund withdrawAndPayRent`

Calls Mezo's `BorrowerOperationsSignatures`, measures the MUSD it received, funds the lease, and refunds any surplus in the same call.

→

3

Lease live

Deposit + rent in escrow. The BTC never leaves the tenant's own trove; only the tenant's signature draws on it.

0.05 BTC
locked by a fresh faucet wallet

1,800 MUSD
minted into the escrow

50 kept
deposit + 3 periods of lease #4

1,750 back
refunded in the same transaction

Lease #4 · tx 0xc3a379e0...0d8e on explorer.test.mezo.org · fork test: test/RentEscrowV2.fork.t.sol

IDLE MUSD

Don't park MUSD. Mint each month when it's due.

We read the Stability Pool source

- **No MUSD yield**: only BTC gains from liquidations.
- Deposits **lose MUSD** when liquidations hit.
- Withdrawals **freeze** while any trove is under 110%.

A tenant's deposit must come back in full, so it stays in the escrow. docs/STABILITY-POOL-CHECK.md

Pay monthly from the trove

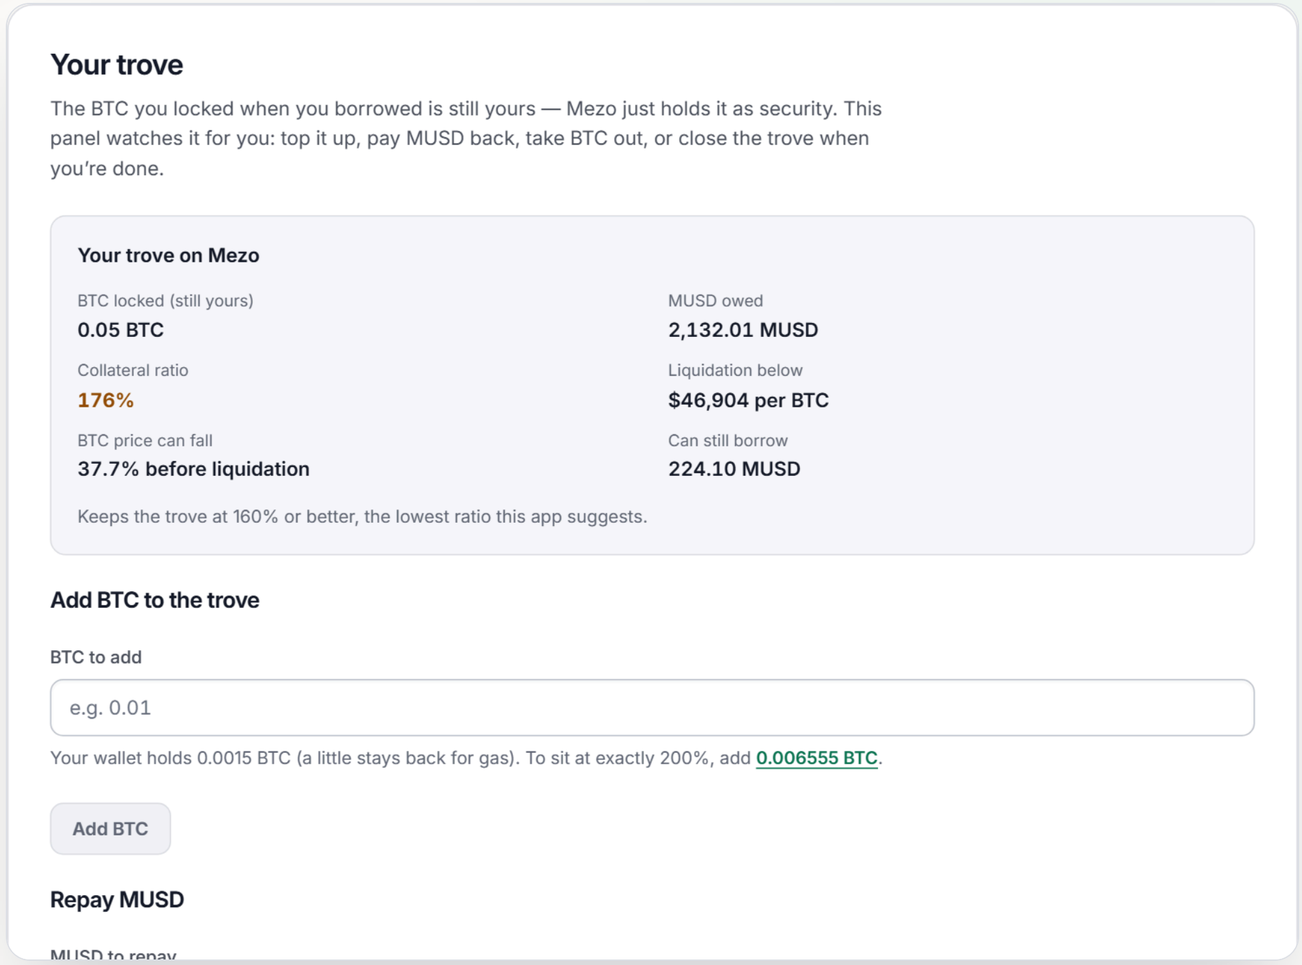

- Start with **deposit + one month**, not the whole term.
- Each month: one signature, `withdrawAndPayRent` mints that month's rent into the escrow.
- **No idle prepaid MUSD**, no interest on months not yet due, BTC keeps backing the trove.

Miss a month: the landlord can take **at most one month's rent** from the deposit. Unpaid rent is never reachable.

AFTER PAYING

Your trove, managed in the app.

- **Ratio, liquidation price** and how far BTC can fall, live from Mezo's price feed.
- **Add BTC, repay MUSD, withdraw BTC, close the trove**, each one transaction.
- **Recovery Mode:** new borrowing blocked with a plain explanation; repay and add still work.
- Headroom from `getTroveMaxBorrowingCapacity`; never suggests a ratio under 160%.

UNHAPPY ENDINGS

Every way a lease can end, without holding anyone hostage.

Mutual termination

Leave early, by agreement

One side proposes a split with a penalty to the landlord; the other accepts the exact terms (hash-bound). No arbiter.

Lease #2: landlord 15 MUSD, tenant 35 back

Dispute timeout

A stalled dispute settles itself

If the arbiter doesn't rule, anyone settles after the timeout: earned rent to the landlord, the rest to the tenant.

Lease #3: tenant 50 MUSD back · 600 s on testnet, 30 days in production

Monthly default

A missed month has a ceiling

One full period past due, the landlord can claim at most one month's rent from the deposit; the tenant gets the rest.

`claimDefault` · covered by invariant tests

No owner, no admin key, no fee, no upgrade path. The arbiter can only split a disputed lease's own escrow between its two parties.

PROOF, ON MEZO TESTNET

Every promise from the Wave 1 form, run on-chain.

LEASE (RENTESCROWV2)	WHAT IT PROVES	OUTCOME
#1 · monthly	Deposit + first month from the trove, later months via `withdrawAndPayRent`	**Closed, deposit back**
#2 · prepaid	Mutual early termination	**Closed by agreement**
#3 · prepaid	Dispute → `resolveByTimeout`	**Settled by timeout**
#4 · prepaid	Fresh wallet: `borrowAndFund` opens the trove and pays, one tx	**Closed, deposit back**
#5 · monthly	Deposit + first month via `withdrawAndFund`, later months paid from the wallet	**Closed, deposit back**
#6 · monthly	Every month minted from the trove: `withdrawAndFund`, then `withdrawAndPayRent` twice	**Closed, deposit back**
#7 · monthly	The demo video run: mint from the trove, pay monthly, release, close	**Closed, deposit back**

BUSINESS MODEL

The escrow is free. The portal earns 1%.

0%

Escrow fee, forever

Immutable, no owner, no fee switch. Nothing on-chain can start charging later.

1%

Of rent, from landlords

Charged off-chain in the rentouts.co portals, with listing and management. Planned with the portal integration (Q1 2027).

0

Extra for tenants

Tenants pay rent and Mezo's own borrowing fee, nothing to RentOuts. Nobody pays twice.

Why Mezo wins

Rent is the biggest recurring bill people pay. Every tenant who borrows to pay it opens a Mezo trove (≥ 1,800 MUSD) and keeps it for the whole lease, 6 to 24 months, minting a little more each month.

NEXT

From demo leases to real ones.

Wave 2 · shipped

Composed with Mezo

Borrow-and-pay in one tx, pay monthly from the trove, termination, dispute timeout, Your trove.

Wave 3

Real users

Outside tenants and landlords on testnet, landlord self-serve allowlist.

Q1 2027

In the product

MUSD as a payment option in the rentouts.co portals, invite-only beta leases.

Q2 2027

Mainnet

External audit, Mezo mainnet launch, multisig arbiter.

Known limits today: Mezo's 1,800 MUSD trove floor (about 0.04–0.05 BTC to start), testnet only, no audit yet, and local deposit rules that vary. Leases so far are the team's demos.
