RentOuts × Mezo

Mezo Buildathon · Wave 1 · Track 2

Keep your bitcoin.
Pay your rent.

Long-term rent and deposits in MUSD, through a non-custodial escrow on Mezo. Borrow MUSD against BTC, prepay the lease, get the deposit back at move-out.

mezo.rentouts.co · github.com/AiAlchemist0/rentouts-musd · rentouts.co

THE PROBLEM

A long lease puts one side at the other's mercy.

Renters

Hand a deposit to the landlord's bank and hope to see it again. Small-claims court is the only door.

Owners

Chase late rent, bounced payments and reversals months later. Two spreadsheets, no shared ledger.

Bitcoin holders

Rent is the biggest bill most people pay. Today, paying it in dollars means selling BTC — and the tax event that comes with it.

AN EXISTING PRODUCT

RentOuts is a live long-term rental marketplace — not Airbnb.

- **6–24 month homes**, not nightly stays. Not a broker, not a property manager, never the merchant of record.
- **Live, invite-only** at rentouts.co: owner and renter portals, listings, inquiries, Ethereum sign-in, payout wallets.
- **The escrow is the lease.** RentOuts never holds deposits or rent; the contract does.
- **Business model (planned):** renters pay 0%, owners pay 1.5% when rent settles. Not charged in this testnet contract.

Company

RentOuts Co.

Delaware corporation · existing product · new MUSD integration built in Wave 1

THE MUSD LOOP

Rent paid in a Bitcoin-backed dollar, without selling bitcoin.

1

Lock BTC

Tenant opens a Mezo trove. The BTC stays theirs, as collateral.

→ 2

Borrow MUSD

Mezo Borrow mints MUSD against it — from inside the RentOuts app.

→ 3

Prepay the lease

Deposit + rent go into RentEscrow. Not to RentOuts, not to the landlord.

→ 4

Rent out, deposit back

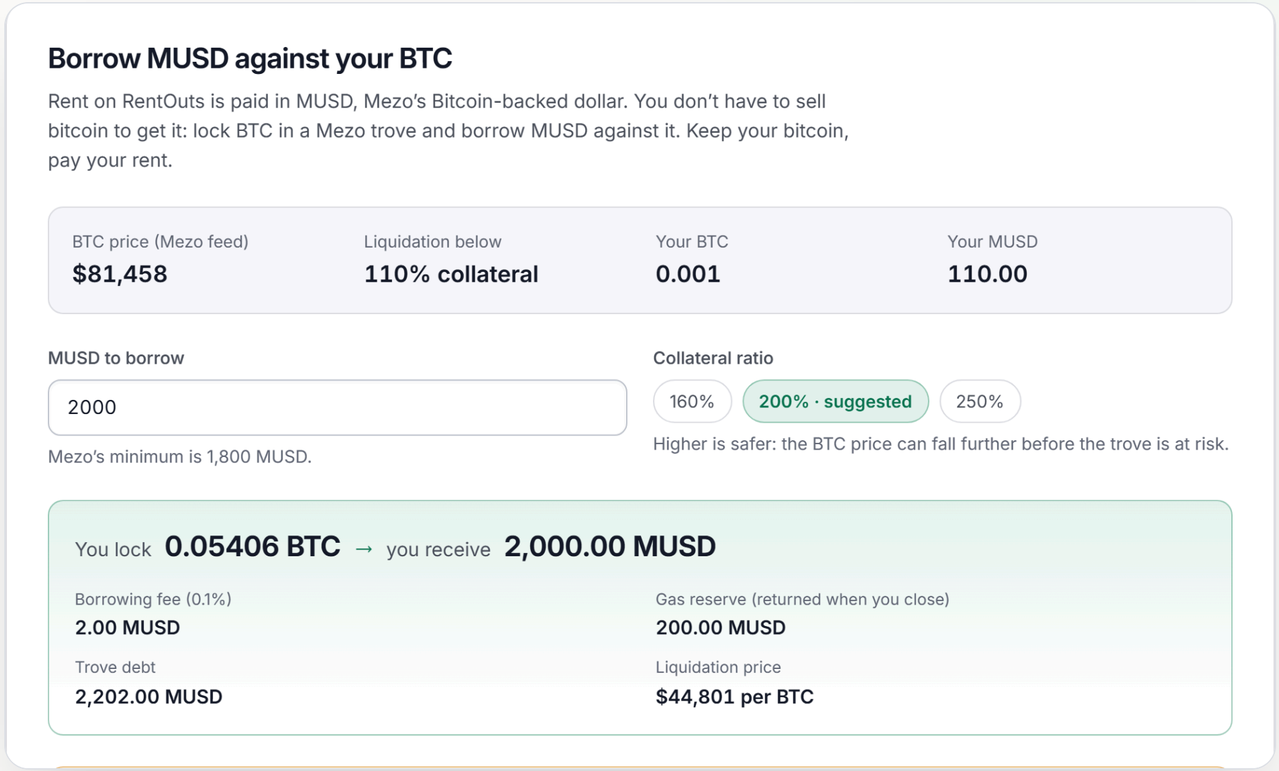

Rent unlocks to the landlord each period. The deposit returns at move-out.

The landlord receives dollars on schedule and can never take rent early. The tenant can never be late. Neither has to trust the other — or RentOuts.

THE PRODUCT

Try it with one wallet at mezo.rentouts.co

- **Get a lease** from the demo landlord contract — or list your own.
- **Borrow MUSD** against BTC in-app: live price, ratio, fee, liquidation price.
- **Pay in MUSD**, then watch rent release period by period.
- **Close** — the deposit comes straight back.

HOW IT'S BUILT

Composes with Mezo Borrow. Holds nothing it doesn't have to.

Mezo Borrow

`BorrowerOperations`
`openTrove · withdrawMUSD`
`PriceFeed · HintHelpers`

→

MUSD

The escrow's settlement token, fixed at deployment. 18 decimals.

→

RentEscrow

`create · fund · claimRent`
`close · dispute → arbiter`

Non-custodial

No admin keys, no fee, not upgradeable. A separate arbiter can only split a disputed lease between its two parties.

Tested

104 contract tests incl. an invariant suite (escrow balance always equals the sum of its leases) · 112 app tests.

Composable

LeaseShare1155 tokenizes each lease (RWA). DemoLandlord shows any contract can be a landlord.

PROOF, ON MEZO TESTNET

Live, verified, and running through judging.

CONTRACT	ADDRESS	STATUS
RentEscrow (token = MUSD)	`0xA9f09366991E6df87855F4B99025911790d4C3aF`	**Sourcify exact match**
LeaseShare1155	`0xfE8bF13ed62A473277d841b0DEDf7720C3DBc820`	**Sourcify exact match**
DemoLandlord	`0x6621dE90776302aD1a3C0190141f9169B4A0112B`	**Sourcify exact match**

Lease #1

Minted MUSD via openTrove → fund → claim → close. Deposit returned.

Lease #2

800 MUSD prepaid, 50 MUSD/day releasing until Nov 6. Open it in the app with no wallet.

Lease #6

Run end to end on mezo.rentouts.co: demo lease → borrow MUSD in-app → pay → release → close.

WHY IT MATTERS FOR MEZO

Rent is sticky, recurring MUSD demand.

6–24 mo

Every lease locks a deposit plus prepaid rent in MUSD for its whole term.

≥ 1,800

MUSD per new trove: a renter who borrows to pay rent originates a Mezo Borrow position.

0%

Renter fees. A reason for mainstream renters — not only crypto users — to hold MUSD.

26,000 MUSD

One example lease: $2,000 a month for 12 months, prepaid with a $2,000 deposit. That is 26,000 MUSD held in escrow on day one and released to the landlord over a year.

Track 2, access and distribution: a marketplace that meets people at the bill they already pay every month.

NEXT

Three milestones.

Known limits today: a ~0.04–0.05 BTC minimum to borrow (Mezo's 1,800 MUSD trove floor), the whole term prepaid, early exits only through a dispute, and local deposit rules that vary.

Wave 2 · by Nov 15

Lower the barrier

Pay monthly instead of prepaying the term, mutual early termination, a dispute timeout, borrow-and-pay in one transaction.

Q1 2027

In the product

MUSD as a payment option in the rentouts.co owner and renter portals for invite-only beta leases.

Q2 2027

Mainnet

External audit, Mezo mainnet launch, multisig arbiter.

RentOuts × Mezo
